

## NEXT - Comparison of Articles

### WHAT IS THE COMPARISON OF ARTICLES?

The „**Article comparison**“ is a module within the **TOPMOTIVE catalog NEXT**. It supports the user in the comparison of several products. The overall goal: Through a precise comparison of the respective product features, repair shops can find the desired and suitable spare part faster, can place it into the shopping cart and can finally order it.

### WHAT FUNCTIONS DOES THE COMPARISON OF ARTICLES PROVIDE?

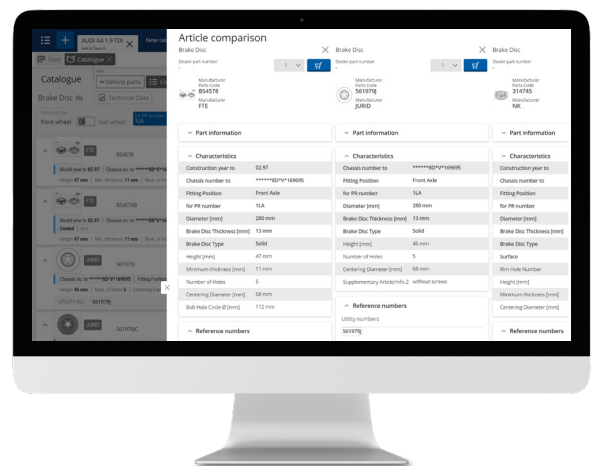

Basically, a selection of spare parts in the linear representation within the article list can be realized very easily. However, certain components require a comparison of the products in order to compare the respective characteristics one-to-one.

This function allows to select several products in the article list and to compare them by clicking in the so-called comparison dialog to be displayed. The detailed comparative information comes from all existing data sources.

Once the comparison is complete, one has the option of selecting the desired and suitable articles by click directly into the shopping cart or delete it from the comparison list with an „X“.

### WHAT BENEFITS DOES THE COMPARISON OF ARTICLES OFFER?

- + Considerable reduction of work for wholesalers and repair shops
- + Significant simplification of the search in the catalog through direct comparison
- + More efficient product selection
- + Reduction of incorrect orders and returns
