UPGRADE PACKAGE 1

ADJUSTABLE SIDE FRAME

Through the presentation of larger surfaces within the article lists, the features and content currently displayed, this new feature allows you to work more efficiently in the catalog. The left frame can be hidden by clicking on the double arrow or open up again.

ARTICLE LIST (see extra flyer)

The new dynamic article list is a completely new development in regards to displaying products. The main characteristics of this feature are the filtering and limiting options in the list of articles, offered by the wholesalers. For long lists of articles the new paging function applies. This primarily shows the first 50 articles (amount is catalog-specific adjustable) and is loaded in the background. With the new filter options (product group, manufacturer or installation side) the user also gets new opportunities to quickly set filters and display shortened lists.

This function thus accelerates the loading time of the entire article identification.

FAST CLICK BY TM (see extra flyer)

FAST CLICK BY TM is a function that aims to guide users quickly to a result for their article search. Through this feature, we bring together assemblies and logically related product groups and show them concurrently. The structure of these groups is based on the findings through TM Analytics and has been refined by the TOPMOTIVE team. To enable you as a wholesaler to customize your system accordingly you can modify this in each of your catalogs. Also, the icons for displaying the groups in FAST CLICK BY TM can be individualized.

The new features "article lists" and "paging" are also fully considered at this point.

ARTICLE DIRECT SEARCH

Article direct searches in the catalog, for example with wildcard (*), sometimes lead to article lists with more than 10,000 hits. To enable a faster parts identification, there are now filter options in the article list to select the product group or parts manufacturer. Additionally, users can use the option „Exact Match“ to search only in specific data pools like OE numbers or EAN codes.

ADDITIONAL DEVELOPMENTS (NOT PART OF THE UPGRADED PACKAGE 1):

APP DEVELOPMENT (see extra flyer)

We recreated the APPs for Apple iOS and Android in the latest OS versions for all our customers that have their own app. The surfaces were revised and simplified in many regards. We also implemented new functions, such as the Premium Universal Parts Search.

HAYNESPRO (see extra flyer)

The new integration of HaynesPro data carried out at the end of 2014 has now again been updated completely and improved by many details in the handling of processes & work management. The goal was to improve the work flows in the repair shops even further. It is now possible to open the parts catalog when active in the HaynesPro application. Once again, you can decide which of your customers will use which package of HaynesPro.

LANDING-PAGE (see extra flyer)

The new landing page provides quick access to the most common searches and the history of selected vehicles and article numbers. The upper banner is for each catalog individually maintainable and replaceable. Thus, you get the option to customize your catalog further.

The individual search options can be, depending on the priority of the user, moved by drag and drop. The user can only see and use those options that are activated for his login in the catalog.

BOOKMARKS

Selected articles can from now on be temporarily stored in a shopping list. By moving the mouse over the shopping cart you can see a fast and compact overview of marked articles.

TOP TEN 2.0 (see extra flyer)

Based on the user behavior of your customers, the already known function TOP TEN has been developed further, e.g. by adding the mounting position for specific articles.

SINGLE USER LOGIN

The Single User Login involves the option to restrict the use of logins. From now on, the application per license is limited to one user. This means, if a new user (with the same login data) wants to log into the system simultaneously, the other user will be noticed and logged out.

RANGE LIMITATION

In the administration menu it is possible to choose if only manufacturer products are displayed that have a trade number in the catalog. Depending on this setting, the list of results for the same search term can be longer or shorter.

TECRM1

In the new version of the catalog, technical data of our partner TecRMI was fully implemented. Convenient to use and fully integrated into the workflow, you can also activate respective packages of technical data provided by this supplier for your customers.

EUROTAX GTI 2.0 (see extra flyer)

The redesigned Eurotax graphical parts identification 2.0 has been greatly improved in two essential elements. Firstly, the surface has been significantly simplified and made more userfriendly. Secondly, the entire processing of the background data, was entirely relaunched and became more efficient. The result is impressive and extremely easy to handle. From now on, Eurotax GTI 2.0 only requests vehicle details if these are relevant for the spare part identification.
