TYRE HOTEL

01 WHAT IS THE TMERIK TYRE HOTEL?

The **tyre hotel** is a module of our ERP system **tmERIK**. It optimizes the management and storage of tyre sets with a digital, automated solution. The seamless integration of tmERIK into all browser-based TOPMOTIVE catalog systems makes everyday workshop life easier and improves digital communication.

02 WHAT FUNCTIONS DOES THE TYRE HOTEL PROVIDE?

Digital storage & management: Tyre sets can be assigned to vehicles, tread depths can be entered and storage locations can be managed. This is made possible by the standardized recording of tyre sets using KBA numbers (car registration number).

QR code integration & log documentation: Tyre sets can be identified via QR codes and all relevant data is automatically documented.

Automatic warnings & filter functions: System alerts for occupied storage locations and damaged tyres prevent errors. Advanced filter options enable targeted management by DOT numbers, sizes, manufacturers, wear or damage.

Efficient processing & history: Rim and tyre conditions can be updated, damage can be documented with photos and all events can be tracked.

Flexible storage system: Tyres can be stored with or without rims. Efficient planning is made possible with demand analyses.

# 03 WHAT BENEFITS DOES THE ALL-INCLUSIVE TYRE HOTEL PROVIDE?

Optimized processes: Fast and transparent tyre storage with minimal effort.

Time savings & error minimization: Automated processes reduce manual work and prevent incorrect entries.

Digital & sustainable documentation: All data can be accessed at any time and exported in paperless form.

Increased customer loyalty: Automatic reminders, status updates and reports improve customer service.

Future-proof: Regular updates and system improvements guarantee long-term efficiency.
