

WHAT IS MYTRUCK?

MyTruck is the **Truck-VIN-Catalog of TOPMOTIVE for fleets.**

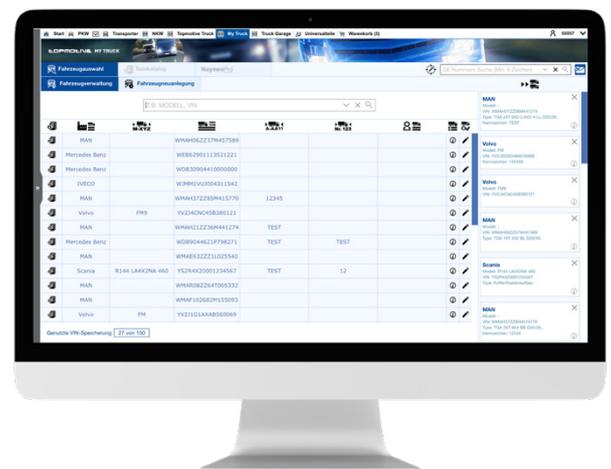

This way, fleet repair shops have the possibility to manage their existing fleet as well as to add new vehicles to it for a subsequent service. Due to the specially developed search logic, the searched spare parts can be selected quickly and effectively on an OE basis. Due to the direct connection to your article master, availability and prices are displayed immediately – if desired also alternatives from the IAM.

WHICH FUNCTIONS AND BENEFITS DOES MYTRUCK PROVIDE?

MyTruck is available in four different packages – depending on how many VIN numbers should be included. The packages are staggered for example as follows: 10, 25, 50 or 100 VIN numbers.

Vehicle management makes it possible to pick up and save new vehicles as well as to select already created vehicles using different search options – for example by number plate, VIN number, vehicle owner, vehicle number or model. The history of the last selected vehicles are quickly visible.

Through the connection to **your parts catalogs**, workshops identify the required spare parts quickly and easily. The item direct search, matching the OE number, prices and availability are queried directly. Furthermore, there is the option to integrate technical data of HaynesPro „WorkshopData – Truck Edition“. Thus, your customers can realize the truck maintenance work a lot faster and easier – which leads to a more intense customer retention.
